

Possible features:

1. 🔥 Co-curricular activities. E.g. Club activities [extra backup]

2. Ai for routine

3. Global Search

Jawadul Arham— User Profiles, Permissions & Directory

(Login/logout/SSO is baseline plumbing every module needs, not a listed feature — no one "owns" it)

- 🔥 Role-based access control system (permission levels for student/faculty/admin — what each role can see/do across the portal)
- 🔥 Faculty/staff directory with search (with filter), contact info, and advising details (from Connect)
- Club recruitment and notice
- Notification/account preferences settings page
- Attendance tracking for only faculties (connect)

Afnan Mohammad Hafiz — Course Registration & Grades (Connect module)

- 🔥 Course registration with real-time seat availability
- 🔥 Ai chatbot
- Grade tracking with GPA calculation across semesters and Static transcript view [future]
- Course catalog browsing/search
- Advisor based advising

Nafiz Shahriar Sami — Learning Content & Assignments (buX module)

- 🔥 Assignment submission system with file upload + deadline enforcement
- 🔥 Video lecture streaming/embedding with watch-progress tracking
- Course materials repository (upload/download docs & slides)
- Academic calendar view
- Assignment listing page sorted by due date

Eusha Kayenat — Real-Time Communication (Discord/Slack-style)

- 🔥 Real-time chat via WebSockets, one channel per course
- 🔥 Real Time Notification system (in-app/email) for grades, deadlines, announcements (seat availability for desired sections)
- Direct messaging between users
- Online/offline presence indicator
- Auto-generated channel creation on course enrollment

Ibsan Hossain Ansari — Dashboard, Notifications & Billing

- 🔥 Unified dashboard aggregating classes, assignments, messages, billing
- 🔥 Show closest branch of payment using gps data
- Billing/payment status page (static display) - Stripe payment
- Exam date countdown.
- Routine creation for future and current semesters (preprereg)

Stretch Feature (not counted in the 25 above) — AI Chatbot

- AI study/support assistant using Codex credits — could answer FAQs (deadlines, registration steps, policies), summarize course materials, or act as a triage bot inside a dedicated chatbot channel in the communication module
- Since it touches both the dashboard (entry point) and chat (delivery), it fits most naturally as a **joint add-on for Member 4 + Member 5** once their core 5 are done — don't let anyone start on it before their core features are solid
- Worth flagging in the SRS itself as a "future enhancement" in the Conclusion even if it doesn't make it into Functional Requirements, since it's a genuine differentiator

Member 5 — Challenges, QA & Compilation

- Section 8: Challenges (real-time sync across 3 merged systems, data migration from Connect/buX, scalability, single sign-on integration, low-connectivity access)
- Collect References from everyone (cite Connect, buX, and comparable systems like edX/Slack) — Section 10
- Final compile: merge all sections into one document, fix formatting/fonts/headings to match the sample SRS structure, proofread
- Do a final pass making sure numbering and TOC (if required) are consistent
